EDUCATION

BS Intelligent Systems & Robotics

The Islamia University of Bahawalpur

Oct 2021 – Jul 2025

CGPA 3.50 / 4.00

AI · Machine Learning · Computer Vision

SKILLS

LANGUAGES

Python · C++ · SQL

AI / ML

LLMs · RAG · Computer Vision · LLM Agents · Machine Learning · Deep Learning · NLP · Transformers

FRAMEWORKS

PyTorch · OpenCV · Hugging Face · TensorFlow · Scikit-Learn · LangChain · Ollama · FastAPI · Streamlit

MODELS & LIBRARIES

Sentence-Transformers · faster-whisper · DeepFace · dlib / face_recognition

DATA & CLOUD

FAISS · ChromaDB · Firebase · Azure AI Services · Azure Functions · Document Intelligence

PROFILE

AI/ML engineer who turns ideas into **working systems** — a RAG app that answers questions about your own documents, a voice assistant driven by an LLM agent, and real-time face recognition. Hands-on with Python, PyTorch, LangChain, OpenCV and Hugging Face, and comfortable taking a project end to end, from the first prototype to something people can install and use. Ready to bring that mindset to a junior AI/ML role.

PROJECTS

DocuChat — Local RAG Document Q&A

LLM · NLP

FastAPI · FAISS · MiniLM · TinyLlama · Ollama · Streamlit

github.com/chnaumankamboh/docuchat-local-rag

- Built a fully local RAG app: users upload PDF, DOCX or TXT files in a FastAPI web UI and get answers with their sources, with no API key or cloud calls.
- MiniLM embeddings in a FAISS index with a relevance threshold; new uploads are indexed live, and re-uploading a file replaces its old chunks.
- Found TinyLlama (1.1B) contradicting its own retrieved context, so made generation swappable: llama3.2:3b through Ollama answered the test questions correctly.

UniAttend — Face-Recognition Attendance

Computer Vision

Python · OpenCV · dlib · DeepFace · Firebase · CustomTkinter

github.com/chnaumankamboh/uniattend-face-attendance

- Desktop app that recognises students from a live webcam with 128-d dlib face encodings, optimised for low-cost hardware by detecting faces on downscaled frames.
- DeepFace expression analysis runs in the background; attendance is logged to Firebase with monthly per-class Excel reports.
- Admin and teacher logins with salted PBKDF2 password hashing; packaged as a Windows installer with PyInstaller and Inno Setup.

Jarvis — LLM Voice Assistant

LLM Agents

Python · faster-whisper · Ollama · Claude API · Tool calling

github.com/chnaumankamboh/jarvis-voice-assistant

- Voice pipeline: local faster-whisper speech-to-text with voice-activity filtering, an LLM agent that calls tools, and offline text-to-speech.
- One tool registry (websites, media, file search, weather, time, news) shared by two interchangeable brains: a local Ollama model or the Claude API.
- Capped the tool-calling loop and trimmed conversation history so long sessions stay inside the model's context window.
